

Analysis of Remote Management of KVM Switches

Overview

IP-based KVM systems are increasingly becoming the norm for remote access, whether to connect users to key systems from home or to allow operators working in a network operations centre or control room to remotely control critical equipment that supports their work. This approach enables operators to leverage a company's existing network infrastructure and control servers and other distributed. WinClient and JavaClient both allow for remote access via IP connection so that you can log in to your servers from anywhere over the Internet. Perhaps even more importantly, IP KVM technology ensures those remote connections are secure through a combination of advanced methods. However, compared with general KVM devices, KVM over IP switches are better devices to deal with emergencies because of their function of remote management. And now with KVM-over-IP systems.
