

Broadband installation requires your own fiber optic cable

Overview

Since installing fiber most often requires laying a new cable and setting up specialized equipment, fiber providers typically do not give the option for you to self-install fiber internet. Usually setting up fiber internet requires a professional installation, but there are some parts of the process you can do yourself. In this guide, we'll break down the fiber installation process from start to. In this article we'll break down how fiber internet is installed - from the network fiber drop outside your house to the in-home setup with your router and gateway - and what you should expect at each stage. This technology offers significantly higher speeds, lower latency, and greater reliability compared to traditional cable or DSL connections.

Broadband installation requires your own fiber optic cable

However, because fiber internet connections use a specific type of equipment, you'll need a fiber installation if your property hasn't had one previously. To install a fiber-optic connection, a technician ...
