

C-lens collimator lens

C-lens collimator lens

Engineered for stable and efficient light transmission, this collimator optimizes coupling efficiency and reduces beam divergence, making it a preferred choice for scientific research, optical testing, and ...

C-LENS er the fiber. Our C- and D-lenses are specifically designed for fiber optics applications such as collimators, isolators, switches, collimator arrays, and laser assemblies. Compared with other ...

Specialized for Fiber Optics: The C-lens is expertly designed for use in collimators, isolators, switches, collimator arrays, and laser assemblies, ensuring high performance in fiber optics applications.

C Lens Collimators. Copyright © 2026 OZ Optics Ltd. All rights reserved.

With our experienced optical design engineers, we can also provide designed C-lens per customer's requirement.

Thorlabs offers pigtailed fiber collimators that use C-lenses. These C-lens collimators feature a $\text{\O}1.8$ mm clear aperture and are coupled to SMF-28 Ultra single mode fiber. They are designed to be used in ...

Unlike GRIN lenses, C-Lens (cylindrical lens) structures provide longer working distance and higher thermal stability, making them more reliable in high-power systems and applications ...

C-Lens Collimator Collimating lens are widely used for collimating or coupling beams after the fiber, which are specifically designed for fiber-optics applications such as collimators, isolators, switches, ...

C-Lens (Conventional Lens, spherical lens) Collimator is an optical device which changes the diverging light from a fiber into a parallel beam, or couples a parallel beam into a fiber, by using a C-Lens.

C-lens is specially designed for fiber optics usage in collimator, isolator, switch, collimator array and laser Assembly. Compared to other gradient index lens, C-lens has many advantages including low ...
