

Characteristics of the RL Algorithm for Relay Protection

Characteristics of the RL Algorithm for Relay Protection

This paper proposes a relay protection scheme based on random forest algorithm, combined with IoT technology for real-time data collection and processing, to improve the sensitivity ...

They are intended to quickly identify a fault and isolate it so the balance of the system continue to run under normal conditions. The selection and applications of protective relays and their associated ...

The approach involves replacement of traditional types of relay protection (current protection, distance protection, and other automatic) with decision-making systems adapted to a ...

be easily applied in both a standalone relay and a network of coordinating relays. The trained RL relays can accurately detect faults under situations including high fault impedance, presence of distributed ...

One of the key techniques used in digital relay programming is the application of various protection algorithms. These algorithms determine the relay's response to different types of faults, ...

Starting from the operating characteristics of relay protection, it is suitable for practical engineering applications.

Main approach is to study and develop technical effect criterion for selection of differential relay protection setting and technical efficiency criterion for estimating this setting. The probability ...

In this paper, a novel method for optimizing and coordinating directional overcurrent relays in active distribution networks considering thermal equivalent short-circuit current is proposed.

Because the protection areas of the interlocking-based protection concept are not overlapping and because they do not reach into the protection area of the next relays in the protection chain, a ...

The purpose of this study is to investigate and validate a relay protection algorithm that hinges on the isolation of direct current within the zero-sequence current of a compromised outgoing feeder during ...

We demonstrated the advantages of using new differential-logic and multi-parameter relay protection algorithms, as well as the methods for relay protection tripping parameters calculation.

We demonstrated the advantages of using new differential-logic and multi-parameter relay protection algorithms, as well as the methods for relay ...
