

## Cold Aisle Installation in Telecom Data Centers

### Overview

Cold aisle containment (CAC) is a proven data center cooling strategy that creates physical barriers around cold air supply zones, preventing contamination from hot exhaust air and eliminating the energy-wasting effects of air mixing. To maintain thermal performance, equipment accessibility, and safety, it's essential to follow key spatial guidelines. The one-tool design allows for quick and easy installation, removal, and re-installation with exclusive Magswitch® technology — no drilling required. The Sliding Doors reduce data center. Build Data Center Efficiency with Aisle Containment Solutions. At NexGen Manufacturing, we specialize in the design and production of Data Center Aisle Containment components, engineered to meet the unique demands of facilities ranging from small-scale operations to large enterprise environments. It involves the use of physical barriers or.
