

Comparison of Tracking Resistance of Turkish Optical Cable Terminal Boxes with Traditional Cables

Overview

Abstract—Results are presented of an investigation of an ADSS optical cable for resistance to tracking. This cable is intended for a zonal communication line that is mounted on the supports of high-voltage power lines. Tracking is an electrical breakdown on the surface of an insulating material wherein an initial exposure to electrical arcing heat carbonizes the material. The s, Inc (IEEE) is 1222, “IEEE Standard for All-Dielectric Self-Supporting Fiber Optic Cable (ADSS) for Use on Overhead Utility L eral American Society of Testing and Materials (ASTM) Standards exist for specific material tests such as tracing and erosion resistance. What is the Fiber Termination Box?

Fiber termination box (FTB), also known as optical terminal box (OTB). Defines requirements and test methods for fiber optic connectors, adapters, and connection boxes, including the physical and mechanical properties of Fiber Optic Terminal Box.

Comparison of Tracking Resistance of Turkish Optical Cable Termina

First, in order that an optical fibre demonstrates sufficient performance, characteristics that a cable should possess are described. Then, the method of examining whether the cable has the required ...

Due to the influence of factors such as tower configuration, line phasing, etc., Corning Optical Communications recommends that the owner/operator of the power line be consulted for ...

The Comparative Tracking Index (CTI) is used to measure the electrical breakdown (tracking) properties of an insulating material. Tracking is an electrical breakdown on the surface of an insulating material ...

The Fiber Optic Terminal Box plays an important role in the optical fiber communication system, which is used to protect and connect optical fiber connectors, optical fiber joints and optical ...

Abstract—Results are presented of an investigation of an ADSS optical cable for resistance to tracking. This cable is intended for a zonal communication line that is mounted on the supports of high-voltage ...

The Comparative Tracking Index (CTI) is used to measure the electrical breakdown (tracking) properties of an insulating material. Tracking is an electrical breakdown on the surface of an insulating material wherein an initial exposure to electrical arcing heat carbonizes the material. The carbonized areas are more conductive than the pristine insulator, increasing current flow, resulting in increased heat generation, and eventually the insulation becomes completely conductive.

To address this problem, the fiber termination box (FTB) was created to protect the fragile fiber terminals and provide a simple and clear way to manage the incoming and outgoing cables.

The outer insulating sheath of such a cable is made of polymers that are resistant to electrical discharges that damage the sheath surface. Test methods for evaluating the cable for ...

A series of simulated arcing experiments are conducted in a laboratory setting to investigate the characteristics of dry band arcs on ADSS fiber optic cables.

The document describes optical cables resistant to tracking effects that have been tested and approved according to the IEEE P1222-2011 standard.
