

## Disrupt the main telecommunications fiber optic cable

### Overview

A fiber cut is the physical severing or damage of a fiber optic cable, which disrupts the light signals that carry internet, phone, and data traffic. While these cables are engineered for durability (with some rated to last 25+ years), they are not invulnerable. However, like any technology, fiber optic systems can encounter issues that affect performance. Understanding the common causes and solutions helps maintain. LOS ANGELES (KABC) -- When a communications cable is cut, it can be hundreds of fiber lines serving thousands of customers. Fixing it has been described as putting spaghetti back together.
