

Distribution Box MDF

Overview

In telephony, a main distribution frame (MDF or main frame) is a signal distribution frame for connecting equipment (inside plant) to cables and subscriber carrier equipment (outside plant). The MDF is a termination point within the local telephone exchange where exchange equipment and terminations of local loops are connected by jumper wires at the MDF. All cabl. OperationThe most common kind of large MDF is a long steel rack accessible from both sides. On one side, blocks are arranged horizontally at the front of rack shelves. Jumpers lie on the shelves and go through an. Before 1960, MDF jumpers were generally. This was reliable but slow and expensive. was introduced in the 1960s, and in the 1970s. In the early 21st century most exchanges in the UK, still us.
