

# Enhanced version of optical module

## Overview

Enhanced small form-factor pluggable (eSFP) modules are hot-swappable, low-speed optical modules with the monitoring function. They comply with the specifications defined in the multi-source agreement (MSA) and support synchronous optical network (SONET), Gigabit Ethernet (GE), fiber channel, and other communication. Small Form-factor Pluggable (SFP) is a compact, hot-pluggable network interface module format used for both telecommunication and data communications applications. The wide variety of modules gives you flexible and cost-effective options for all types of interfaces. Cisco offers a range of GBIC, SFP, XFP, SFP+, CXP, CFP, Cisco CPAK, and QSFP+ pluggable modules. Optical modules are components used in optical communications and optical networks to convert optical signals into electrical signals or convert electrical signals into optical signals. They usually come in different package types and have different characteristics. Distinguishing Features of Various.
