

Fiber Optic Switches Without Optical Modules

Fiber Optic Switches Without Optical Modules

Discover fiber switches designed for reliable network connectivity. Browse 10G, 2.5G, and gigabit options to expand your bandwidth.

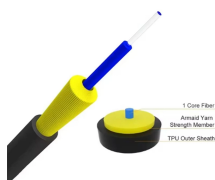

An optical switch automates the connection of one optical fiber to another while maintaining the signal in the optical domain. This eliminates the need to manually move fibers, and instead enables fast, ...

Common switch features include rack mountable and LED indicators. An important environmental parameter to consider for fiber optic switches is the operating temperature.

Fiber-optic switches can be useful for general testing purposes in fiber optics. For example, instead of manually reconnecting fiber-optic connectors too often, one ...

The hermetically sealed MEMS and the laser welded fiber collimators guarantee broad temperature range and superior long-term stability. No epoxy is present in the optical path. The series of co-axial ...

Fiber-optic switches can be useful for general testing purposes in fiber optics. For example, instead of manually reconnecting fiber-optic connectors too often, one should install a switch where this can be ...

Our fiber optical switches offer several control options - remote control, control via button switch or both. The signal passes through the switch optically, without any electrical conversion.

Buy fiber network switches to extend ethernet network over fiber. Order Versitron high speed fiber optic network switches for fiber optic switches application. Our ethernet network switches are best for ...

Controlled by piezoelectric actuators, our fiber switches have no internal optical components and therefore avoid any form of optical aberration. Based on this principle they are wavelength ...

Shop DigiKey's large in-stock selection of Fiber Optic Switches, Multiplexers, Demultiplexers. View inventory, pricing and order now for same day shipping!

Fiber optic switches (single-mode fiber optical switches) are passive devices possessing two or more ports which selectively transmits, redirects or blocks optical power in an optical fiber transmission ...
