

## Gyfta53 communication optical cable

## Gyfta53 communication optical cable

The GYFTA53 cable is an outdoor armored fiber optic cable designed for long-distance, high-capacity communication networks, suitable for both aerial and underground installations.

In the GYFTA53 cable, single-mode/multimode fibers are positioned in the loose tubes, the tubes are filled with water blocking filling compound. Tubes and fillers are stranded around the strength member ...

Then the cable core is covered with a thin Polyethylene (PE) inner sheath, which ...

An Aluminum Polyethylene Laminate (APL) is applied around the cable core. Then the cable core is covered with a thin polyethylene (PE) inner sheath, which is filled with jelly to protect it from water ...

We can provide optical cables with longitudinal color-coded markings on the outer jacket, as per customer requirements, making it easier to identify and maintain multiple cables routed together.

Selecting the correct direct-buried optical fiber cable is crucial for ensuring long-term reliability in underground environments. Below is a structured selection guide based on installation conditions, ...

GYFTA53 (Loose tube stranding, Non-metal strength member, Flooding jelly compound, Aluminum-polyethylene adhesive inner jacket, Steel-polyethylene adhesive outer jacket)  
Standards: YD/T 901 ...

Then the cable core is covered with a thin Polyethylene (PE) inner sheath, which is filled with jelly to protect it from water ingress. After a corrugated steel tape armor is applied the cable is completed ...

The fiber cable GYFTA53 is suitable for installation in conduits or antennas in areas with high incidence of lightning or high voltage exposure. It contains single mode or multimode optical fiber with color ...

Upgrade your data transmission with GYFTA53 optical cables. High strength, hydrolysis resistance, and effective waterproofing performance. Order now!
