

How to change the IP address of a fiber optic router

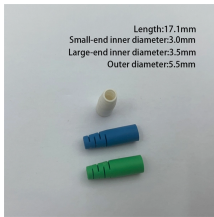

Overview

The simplest way to change your IP address is to power off your router, wait at least 10 seconds, then power it back on. "In my 20 years of managing global networks, I've found that users often confuse the 'Internal Gateway' with the 'External WAN. To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for optimal performance. If that doesn't fix your problem, you may want to set a static IP address instead. If you don't see it, click the navigation menu. Select Edit Network. If you already have a static IP address, you can sign in to the user settings (GUI) for your SmartNID fiber modem to manage setup as shown in the steps below. Using an Ethernet cable, plug a computer into the LAN port on the bottom of your C5500XK SmartNID.
