

How to choose the right model for a beam splitter

Overview

They operate with coherent or incoherent light, splitting by intensity, wavelength, or polarization. Beam splitters play a vital role in optical systems. They are like the “traffic directors” of light. Without them, many optical setups would not function properly. Are you interested in learning about the benefits and differences of the multiple types of beamsplitters offered by Edmund Optics, including plate, cube, pellicle, and polka-dot. Choosing the right beam splitter is crucial, as each type offers unique properties and capabilities.
