

How to test the light source of an optical cable

Overview

Take an LED flashlight and shine the light into one of the fiber strands at one end of the cable. Repeat this process for each. The principle reason for testing fiber optic cable is to verify continuity and look for attenuation. Step 1: Preparation Before starting the test, gather the necessary equipment and tools, such as a power meter, light source, visual fault locator (VFL), cleaning supplies, and protective gear.
