

Laser Diode Color Chart with Images

Laser Diode Color Chart with Images

Wide temperature range and high optical output power of violet, blue, green and red lasers. Leading product performance and innovative packaging; their small package size is particularly beneficial to ...

This table is the information used by MOST diode manufacturers that use color banding on diodes.

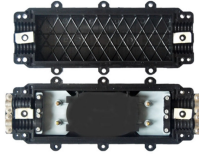

Laser diodes are semiconductor lasers with a current-carrying p-n junction as the gain medium. They are the most important type of electrically pumped lasers.

This allows users to compare laser diodes from all manufacturers and find their best options.

Scroll down to see a quick visual representation of the spectrum for each type of laser medium. Also below is some of the more common wavelengths all on one page for you to browse.

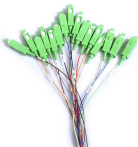

An image is worth a thousand words, but only if you know how to interpret it. Understand what the laser wavelength chart means.

Unlike a regular diode, the goal for a laser diode is to recombine all carriers in the I region, and produce light. Thus, laser diodes are fabricated using direct band-gap semiconductors.

IR laser diodes, red laser diodes, green laser diodes, blue laser diodes, and violet laser diodes are available in a range of wavelengths, output powers, and package types to suit your application ...

This document provides a color chart for identifying diodes based on the color bands near the end of the diode. The chart lists the numeric value that corresponds to each color, along with a suffix letter.

The wavelength chart below shows all the currently available laser wavelengths we offer. Just click on one of the wavelength numbers or the point on the chart and the system will display all the available ...
