

Lifespan of 4-core fiber optic cable

Overview

Theoretical Lifespan: 30 to 50 Years. In a perfect vacuum, the silica glass (SiO_2) core does not degrade. Manufacturers like Wolontek design cables to remain within attenuation specs for this period. But ask any veteran network engineer, and they will tell you a different story. Others, installed in the 1990s, are still running. The lifespan of fiber optic cables can significantly impact the efficiency and reliability of our internet connections. We often hear that fiber optic cable lasts "a lifetime."
