- ⑥ FLAME - RETARDANT SHELL

Overview

Direct attach copper cables (DAC) are specialized cables that connect components within these cooled environments, ensuring reliable data transfer with minimal latency. GrowsFiber's immersion cooling optical transceiver integrates a fiber optic pigtail on the optical port side of the module. The module adopts super air-tight packaging technology and can be immersed in a depth of 1 meter. Conventional air-cooled. Live demonstration for 3. When combined with liquid cooling, it further improves energy efficiency. As a leader in optical interconnect technology, Gigalight is pioneering immersion liquid-cooling extenders and silicon. Cofan's cold plates are designed for efficient liquid cooling in high-power electronics, including applications in power converters, battery management systems, and industrial automation.

Liquid-cooled copper connections for optical modules and other hardware

Working directly with the world's top semiconductor, server and hyperscale technology companies, CoolIT designs and mass-produces highly optimized liquid cooling solutions.

The Octal Small Form Factor Pluggable (OSFP) Connector System provides single- or dual-port, 8- or 16-lane I/O connectivity with DAC, AOC, ACC and optical modules for high-density switch applications.

The common footprint supports a socket interface for the Optical Module and a compatible direct-to-substrate connection for Copper Modules. The 16 total modules are arranged in close proximity to ...

GrowsFiber is perfect for the most demanding immersion liquid cooled data centers by testing each immersion cooling optical module in real liquid-cooled usage scenarios to ensure optimum air ...

As a leader in optical interconnect technology, Gigalight is pioneering immersion liquid-cooling extenders and silicon photonics liquid-cooled optical modules, driving data centers toward ...

With GB200 Racks, there are 4 different major form factors offered, with customization within each. The first one is the GB200 NVL72 form factor. This form factor requires approximately ...

With design flexibility in copper, aluminum, and hybrid materials, these cold plates ensure optimal thermal contact and performance. Whether you need direct-contact cooling or modular ...

Conventional air-cooled heat sinks are replaced with liquid-cooled cold plates, which directly contact the top surface of each pluggable module to efficiently maintain a reasonable ...

Immersion cooling for optical transceivers, as well as copper interconnects, supports broader efforts to enhance sustainability and reduce environmental impacts in data centers.

Direct attach copper cables (DAC) are specialized cables that connect components within these cooled environments, ensuring reliable data transfer with minimal latency.
