

Mongolia Micro-module Data Center Construction Plan

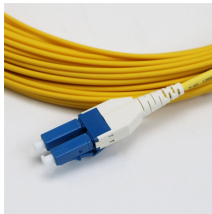

Demand will be guided to the west in an orderly manner, the layout of data center construction will be optimized, and the synergy between east and west will be promoted.

To ensure continued growth, Inner Mongolia has rolled out dedicated policies, optimized industrial planning, and enhanced energy coordination. It is also phasing out energy-inefficient data centers ...

A modular data center is a complete data center, or a critical-infrastructure subsystem, that is engineered, integrated, and tested in a factory before being delivered to site.

Mongolia, long reliant on mining, plans to build data centers powered by renewable energy as it prepares its first sovereign wealth fund aimed at channeling its mineral wealth to social welfare ...

This project aims to increase the use of energy and resource-efficient data centers in Mongolia through the green and sustainable data center approach.
