

Multi-mode and single Nigerian score

Overview

This paper uses a large-scale experiment in rural Nigeria to study the role of survey mode—in-person versus over the phone—in survey measurement and data quality. Multi-mode involves the use of more than one biometric factor or modality as a means of security. However, little evidence exists on the perinatal profile opmental disabilities among the survivors, especially in developing countries. The current edition have been updated with the following changes: 1.

Multi-mode and single Nigerian score

MICS surveys measure key indicators that allow countries to generate data for use in policies and programmes, and to monitor progress towards the Sustainable Development Goals (SDGs) and ...

This paper uses a large-scale experiment in rural Nigeria to study the role of survey mode—in-person versus over the phone—in survey measurement and data quality.
