

Silicone wound tube fiber optic model

Silicone wound tube fiber optic model

Our Silicone Tubing is made from 100% silicone elastomer. It is environmentally friendly and unlike its plastic alternatives, releases no toxic fumes when disposed of by incineration.

Featuring a specially-formulated silicone adhesive that holds tight yet allows for repositioning, Optifoam Gentle Dressings allow for wound healing progress checks.

Discover high-quality silicone tubing for medical devices, offering flexibility, durability, and biocompatibility ideal in many medical applications.

Wound dressing integrated with optic fiber has been fabricated to overcome the limitation of conventional wound monitoring method which relies heavily on visual inspection.

Also known as wound fiber bundles (WFB), large diameter image guides are available in different lengths and diameters, and are suitable for use in applications where images must be transferred ...

In this model, silicone splints are sutured around excisional wounds to prevent contraction and instead promote healing through re-epithelialization.

We manufacture and distribute anatomical models, silicone-based artificial wounds, and medical simulators. Handmade, 100% made in Germany.

It allows healthcare professionals and trainees to practice assessing wound depth and tissue involvement, cleaning, and preparing for suturing or dressing in a realistic, controlled environment.

3D printable mold for silicone casting of wound packing trainer. This is a simple model that can be used to teach/learn wound packing procedures to stop bleeding.

The tubing is designed with embedded filaments that wind in a continuous helical pattern along its length, ensuring resistance to flow restricting conditions. The kink resistant tubing is used for medical ...
