

Transmission distance of multimode gigabit fiber optic cable

More durable and robust

The outer layer is made of environmentally friendly PVC, which is soft and elastic. It can be stretched without damage, so you can use it with confidence.

Overview

MMF supports high data rates—up to 100 Gbps—over distances typically ranging from 300 to 550 meters, depending on fiber type (OM3, OM4, OM5). Multimode fiber optic cables are designed to carry multiple light modes simultaneously, each taking a different path or mode through the fiber. This characteristic makes MMF ideal for high-bandwidth applications over relatively short distances. Common applications include Local Area Networks. Fiber optic transmission distance varies based on fiber type, environmental conditions, and equipment selection. Multi-mode links can be used for data rates up to 800 Gbit/s.
