

## Turkish trough-type cable trays have high strength

## Turkish trough-type cable trays have high strength

Designed to support and protect electrical wiring and communication cables, these trays are especially effective in temperature-sensitive, high-hazard, or corrosive environments.

In order to respond quickly with high-quality solutions to increasing demands and different needs, ARDIC design and manufactures all the molds and even some of the machines in its own units.

They are three times stronger than standard cable trays and have similar characteristics to cable ladders. They are available in hot-dip galvanized and stainless steel, which is resistant to corrosion ...

Upon intense demand, Ardic Electric invested in molds and machinery in addition to the H40 and H50 models, which are Click System Cable duct products, and added the H60, H80 and H100 models ...

Perforated rungs on a ladder-type tray securely fasten cables using cable ties. These trays ensure maximum airflow around the cables, promoting effective ventilation and heat dissipation ...

These applications require cable trays to have high structural strength and durability to withstand harsh weather conditions, vibrations, and heavy loads. Fire-resistant and explosion-proof ...

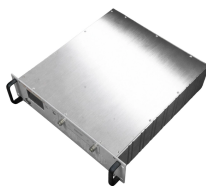

From a design standpoint, trough trays emphasize continuous cable support while maintaining moderate structural strength. They occupy a middle ground between ladder trays and ...

This type of cable tray system is the fastest system to install and provides maximum freedom for cable to enter and exit the system. A large variety of single rail cable trays are available at KMC.

Cablofil steel trough trays provide the strength and security required when then need to limit cable access is of primary importance.

A professional guide to trough type cable trays. Explore load capacity charts, installation guidelines, advantages over ladder type, and key selection criteria for your project.
