

What are small electrical distribution boxes on construction sites called

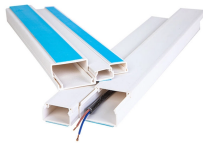

Overview

A spider box is a portable electrical distribution box that is commonly used with temporary and emergency power infrastructure. They often include a portable power distribution panel, also known as a temporary power distribution box or portable power distribution unit (PDU), is a device designed to safely and efficiently distribute electricity from a single power source to multiple devices, tools, or outlets. These versatile units work great for construction sites, entertainment events, and disaster recovery operations. They handle everything from simple 120/240V single-phase loads to powerful. Avoid the cost and hassle of setting up multiple generators with these rugged, yet lightweight power distribution boxes.
