

What fiber optic cables does the UK use

Overview

However, many of the fibre broadband connections in the UK only use fibre optic cables up to the telephone wiring cabinet on your street – this is why such connections are called Fibre To The Cabinet (or FTTC). On the final stretch to your home, data is carried over copper cables –. Fibre optic technology is an effective cabled-based communication system. This type of cabling is used to transfer information via pulses of light, which pass along one or more transparent plastic or glass pipes. In. Other large fibre networks include Virgin Media, CityFibre, Hyperoptic, and Community Fibre, who all pass in excess of a million premises. Each fibre is about as thin as a human hair, yet it can transmit.
