

## What is a complete set of relay protection equipment

### Overview

Combines protection, sensors, control power, and circuit breaker in a single package Typically added to a breaker close circuit to prevent accidental reclosure after a trip. Three fundamental components required for each circuit breaker. Electromechanical protective relays at a hydroelectric generating plant. The rectangular devices are test connection blocks, used for testing and isolation of instrument transformer circuits. CT's transform line current down to a signal level that is.
