

Which is better relay protection or PLC

Overview

If we compare the relay with PLC, PLC systems perform better in terms of work, accuracy. PLC requires less time, less wiring. There will not be much physical work. PLC has more advanced functions as compared to manual work (hardware relay-base). The global PLC market is growing, and by 2026, the market size should amount to over 15. A quick look at these key differences between PLC control systems and. Understanding the differences between relay logic and PLC control, their applications, benefits, and limitations, helps engineers and plant managers make informed decisions to optimize their industrial operations. With over 30 years of experience in industrial automation and motor control, I'll. Relays are used to separate two different voltage levels.
