

Which port on the router should the cold-connector be plugged into

Overview

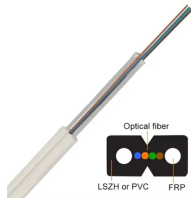

The other end of the cable should be connected to the WAN port on the router. This port is also labeled as "Internet" or "WAN". That is a router, put it in bridge mode if you want to plug your own in and not worry about double NAT Search the model # and figure it out Blue is 5gbps and yellow are probably 1gbps. How much bandwidth does your router need?

Do you anticipate more than 1g going through?

If so blue. Else any of. Most modern routers provide Gigabit Ethernet (1000 Mbps) LAN ports, supporting: Use cases: The WAN port acts as the gateway between your local network and the internet. It supports multiple connection types: Static IP configuration steps: Log in to the router's web interface (default IP:.. The Wide Area Network port connects the router to remote networks like the internet, which is not limited to the scope of the local area network. Some ISPs supply only a modem, in that case, you won't need the DSL port, but you will use the WAN port to connect the ISP's modem too (typically used when you have cable or fiber internet connection) What.

Connect the GREEN fiber connector to the GREEN PON port (if not already connected). To connect your new gateway, simply connect your color-coded cables as you see in the.

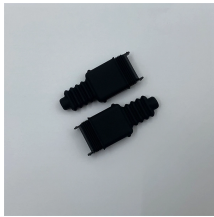

Which port on the router should the cold-connector be plugged into
