

With test resistor terminal box

With test resistor terminal box

The patented, customizable UltraBox™ modular junction boxes from Dairyland feature easy access and the ability to add, remove, or reposition components at any time, unlike existing designs using shunts ...

A range of resistance calibration equipment and test instruments including resistance decade boxes, calibrators, and multimeters.

The PM TS3 CP Test Station is an enclosure that protects circuits and terminals. ProMark's CP Test Station is also used in telecommunications as a grounding box.

The RB10 Resistor Box operates within a wide temperature range ...

With 50+ years of stability data and history, IET Labs manufactures a full line of resistance, capacitance and inductance decade boxes that will cover most any budget and application: field, calibration ...

Choose from our selection of terminal boxes, including over 4,300 products in a wide range of styles and sizes. Same and Next Day Delivery.

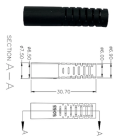

AEMC® decade boxes are built into a metal bench top box and are used for testing and calibration. These decade boxes create a resistance or capacitance with a specific value.

Use this resistor box alongside a current injector for precise control over current, allowing testing of low impedance relays and trips. The resistor box has range of 0.5Ω to 1666.5Ω in 8 steps and maximum ...

The RB10 Resistor Box operates within a wide temperature range of 0°C to 45°C, ensuring reliable performance in various environments. It includes over-temperature protection and a fused common ...

Precision Programmable Resistors are the perfect replacement for any "old school" decade resistance box or resistor substitution device and in many cased multi-thousand dollar high precision units and ...

Calibrate, test, and troubleshoot a circuit without having to replace individual resistors. These boxes can apply different resistances to reduce the current in your circuit. For example, they can help calibrate ...
